Co-funded by the European Union

WOODMEADOWLIFE

„Restoring and promoting a long term sustainable management of Fennoscandian wooded meadows in Estonia and Latvia“

LIFE20 NAT/EE/000074

Deliverable E1

Desing of project notice boards

Due date of deliverable:12/2022

Actual submission date: 12/2022,

05/2026 (version 2)

Beneficiary in charge: Environmental Board

DISCLAIMER

Co-funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or CINEA. Neither the European Union nor the granting authority can be held responsible for them.

Design of project information boards

Within the project, a total of 10 large information boards were designed in Estonia and 10 information boards in Latvia (design completed in 06/2023). The information boards were prepared in Estonian and Latvian, together with a short summary in English.

The site-specific presentations differ according to the project area; however, all boards cover the same key topics: the formation and distribution of wooded meadows, the values of wooded meadows, the interaction between humans and nature in wooded meadows, and the activities of the WOODMEADOWLIFE project. In addition, the boards include a location map and illustrations. Figure 1 provides an overview of the design of the Estonian information board using the Palupõhja wooded meadow as an example. Figure 2 provides an overview of the design of the Latvian wooded meadow information board using the Ziemelgauja project area as an example.

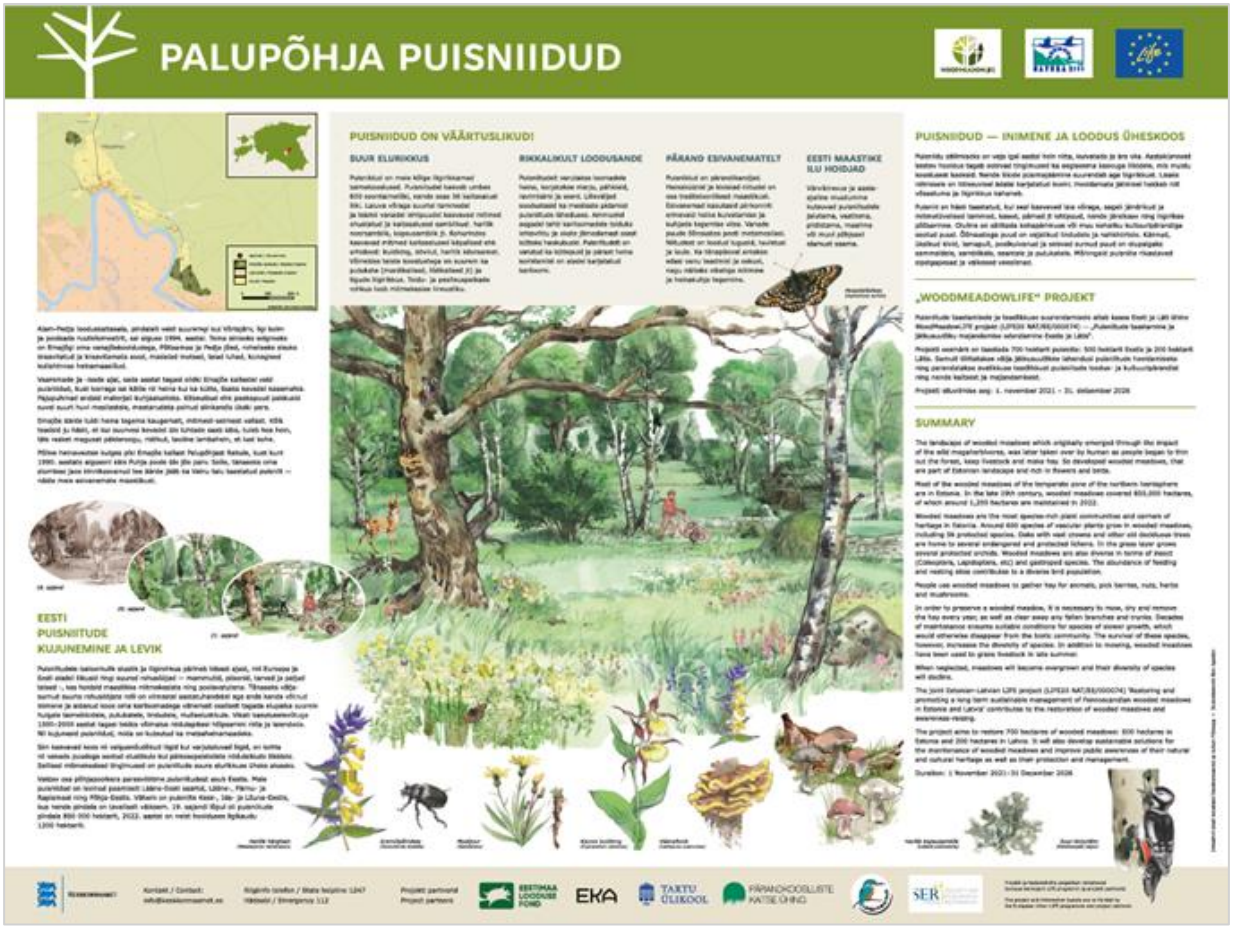

Figure 1. Design of the information board using the Palupõhja project area as an example.

Figure 2. Design of the large information board in Latvia using the Ziemelgauja project area as an example.

When selecting materials for the information boards, we preferred durable and weather-resistant solutions, using wood and aluminium composite materials. At the same time, it was important to us that the materials used would be recyclable at the end of their service life, thereby supporting the principles of sustainable resource use.

Small notice boards

In addition, smaller notice boards informing visitors about wooded meadow restoration activities were designed both in Estonia and Latvia (Figure 3). These boards have been installed along the edges of more frequently visited restored wooded meadows. The first design of the Estonian notice boards was completed in 12/2022, and in September 2024 new boards with an updated design were completed.
